Student Name:
CS455/655-Mobile Sensor Networks: Homework 1. Deadline: Feb 13th (return homework in the class)
Return your homework report and put your source code at the end of your report.
Email your homework report to Bravehung@yahoo.com: Before 11.30pm Feb. 13th

Write a program (Matlab, Cpp, Python, etc) to:

1. Randomly distribute a network of 100 sensor nodes in the area of 180x180. Assume each sensor node has its interaction range r = k*d, where k = 1.2 and d = 15 (See Slide 9 in Lecture 4 to understand these parameters). Draw a communication circle of each sensor node based on its interaction range r. See the figure below:

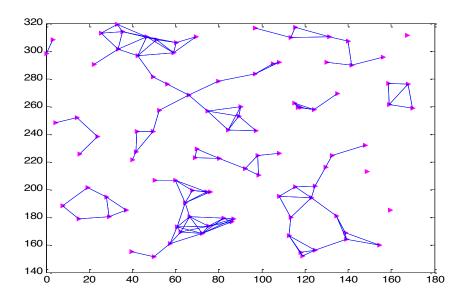

Then plot a network of 100 sensor nodes (see figure below)

2. Find a number of neighbors for each sensor node and output it on a table. Basically you need to write a programing function to do this job. (See a table in the next page)

$$N_i = \{ j \in \mathcal{V} : ||q_j - q_i|| < r \}$$

 $N_i = \{j \in \mathcal{V}: ||q_j-q_i|| < r\}$ 3. Link sensor node i with its neighbors by a blue line (if programing on Matlab, use *line* function to do it). Plot the sensor network with linked neighbors. Hint: a sensor network looks similarly to this:
